Practice finding the MEAN averages.

Each card presents a small group of numbers and you have to find the mean average. Simply plug the numbers into the mean average formula in the lower half of the card. When all numbers are plugged in correctly, and the correct answer is given, the card is marked complete and you advance to the next.

There are mean 8 average questions with 2 numbers, 8 with 3 numbers and 8 with 4 numbers.

The questions are randomised but the first card is the instructions card, which shows clearly how the mean average is calculated along with two examples of how to correctly fill in all the fields.

The **MEAN** is the average of the numbers

Add up all the numbers, then divide by how many numbers there are

1, 7

$$\frac{1 + 7}{2} = \frac{8}{2} = 4$$

2, 4, 6

$$\frac{2 + 4 + 6}{3} = \frac{12}{3} = 4$$

What is the **MEAN** average of these numbers?

1, 5

$$\frac{\square + \square}{\square} = \frac{\square}{\square} = \square$$
