

Averages MODE

25 Boom cards

Click [HERE](#) for a playable preview

Practice finding the MODE averages.

Each card presents a small group of numbers and you have to find the mode average. The mode average is the number that occurs most frequently from a list.

There are 24 mode average question cards in all.

The questions are randomised but the first card is the instructions card, which shows clearly how the median average is calculated.

The **MODE** is the number that occurs most often

Look for the number that occurs more than any other in the list

3, 5, 6, 2, 3, 1, 7

the only number that occurs twice is 3, so that's the mode, since all other numbers occur only once

2, 1, 3, 5, 2, 5, 1, 5, 5, 2

the number 5 occurs four times but no other number occurs that many times, so that's the mode

What is the **MODE** average of these numbers?

5, 7, 5

What is the **MODE** average of these numbers?

78, 87, 88, 78

What is the **MODE** average of these numbers?

34, 36, 32, 35, 34, 33

You may be eligible for a free trial from Boom Learning. Read here for details: <http://bit.ly/BoomTrial>. If you choose not to stay on a premium account after your free trial, you will still be able to assign all your Boom Cards to as many students as you see fit using Fast Play pins (which give instant feedback for decks that are self-grading).
