

Logic Puzzles numbers

Mixed sums (+ - x ÷) math puzzles

25 Google slides

4 instruction slides

1 solutions side

20 mixed sum (+ - x ÷) puzzle slides

Logic Puzzles numbers is a fun series of GOOGLE Slides that test a student's mental math skills with basic arithmetic through a fun game of trying to find the right numbers to make all the sums work. A 2x2 or 3x3 grid is displayed into which the student must place 4 or 9 numbers. These numbers **add**, **subtract**, **multiply** or **divide** in various directions (depending on the size of the grid) to make various additional numbers. Only the correct permutation of numbers added to the grid will result in the sums all working out correctly. The first few slides are relatively simple, and will allow the student to get the hang of things. They become progressively more challenging as you progress through the deck. In this deck, **addition**, **subtraction**, **multiplication** and **division** sums are presented.

1. Study the 2x2 grid on each slide

2. Add a number (from 1-100) into each square

3. Make all 5 equations correct

4. When all 5 equations are correct, the puzzle is solved!

1. Study the 2x2 grid on each slide

2. Add a number (from 1-100) into each square

3. Make all 5 equations correct

4. When all 5 equations are correct, the puzzle is solved!
