

Math Circles

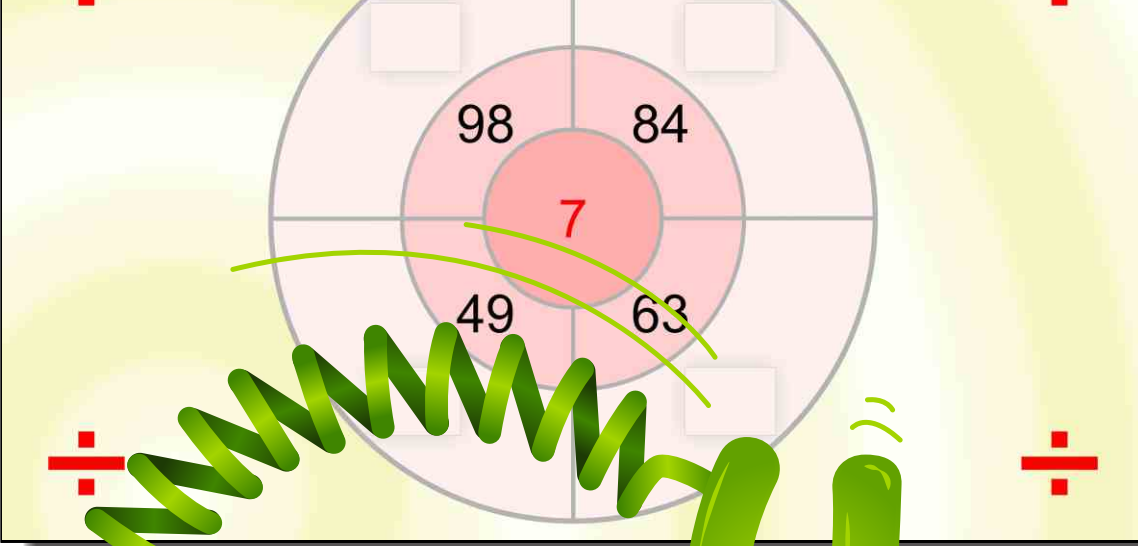

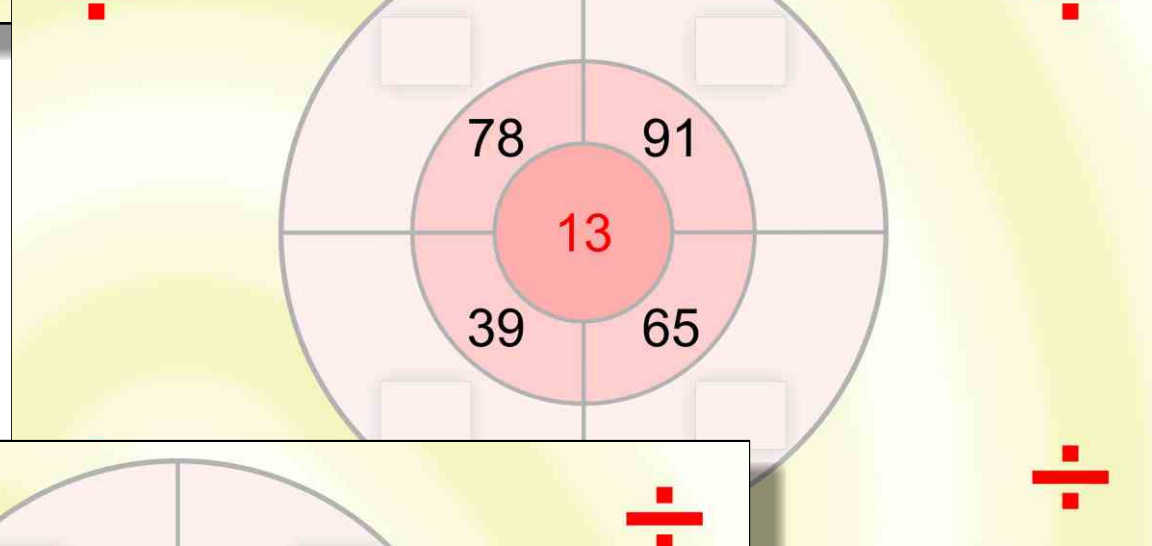

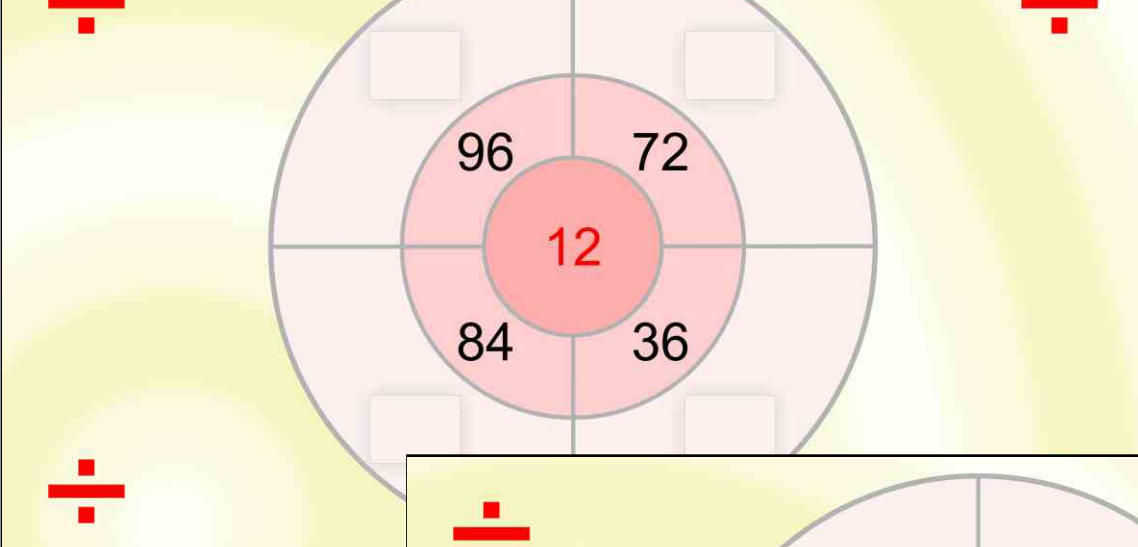

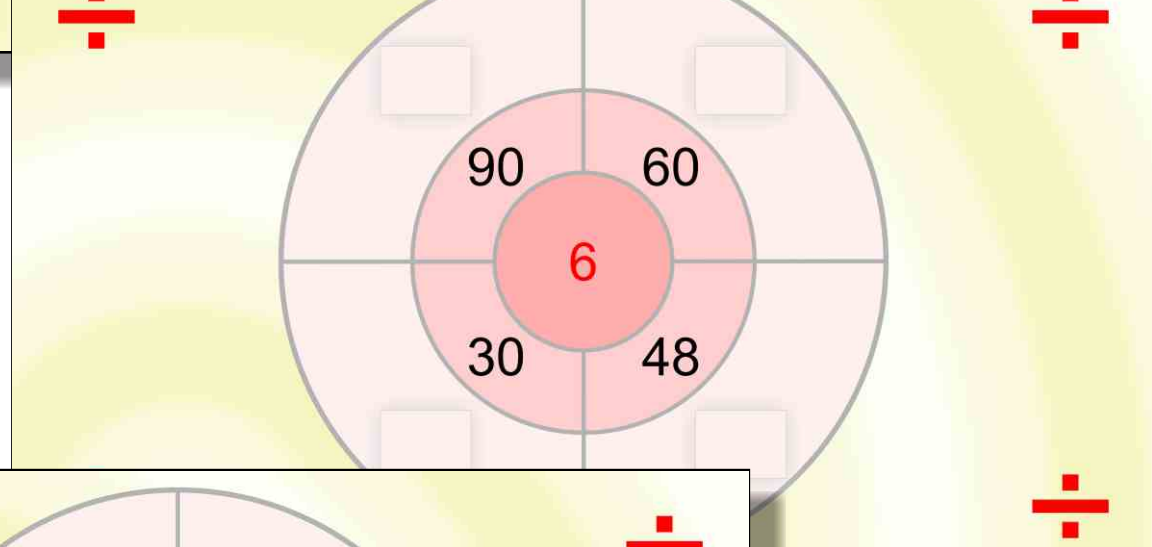

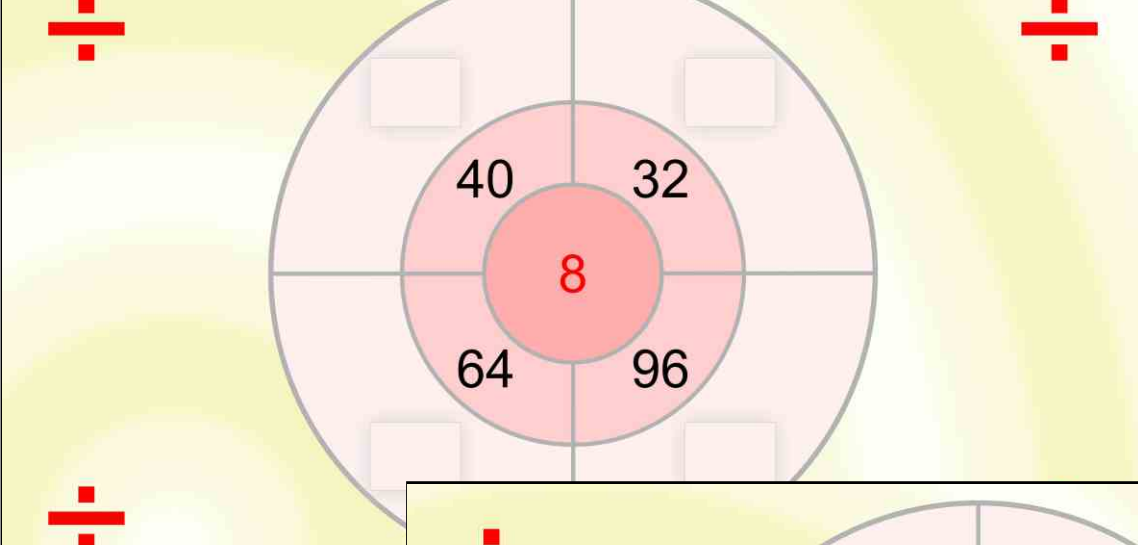

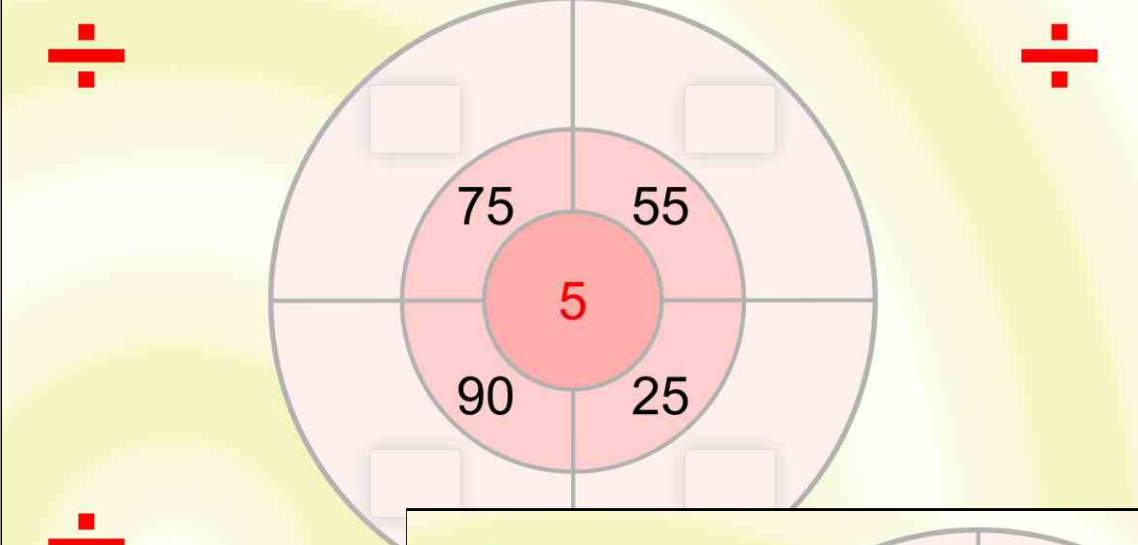

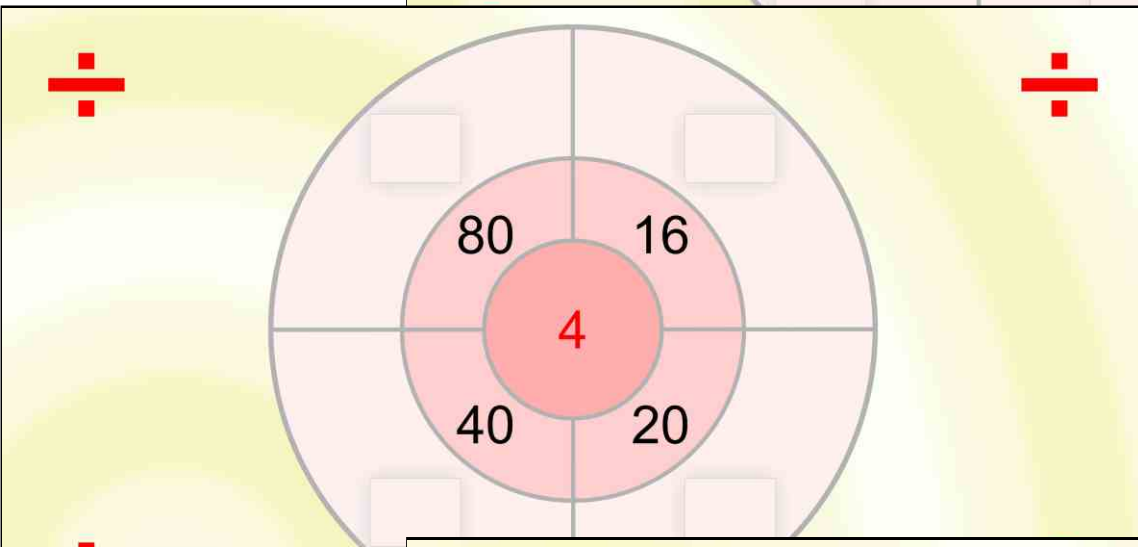

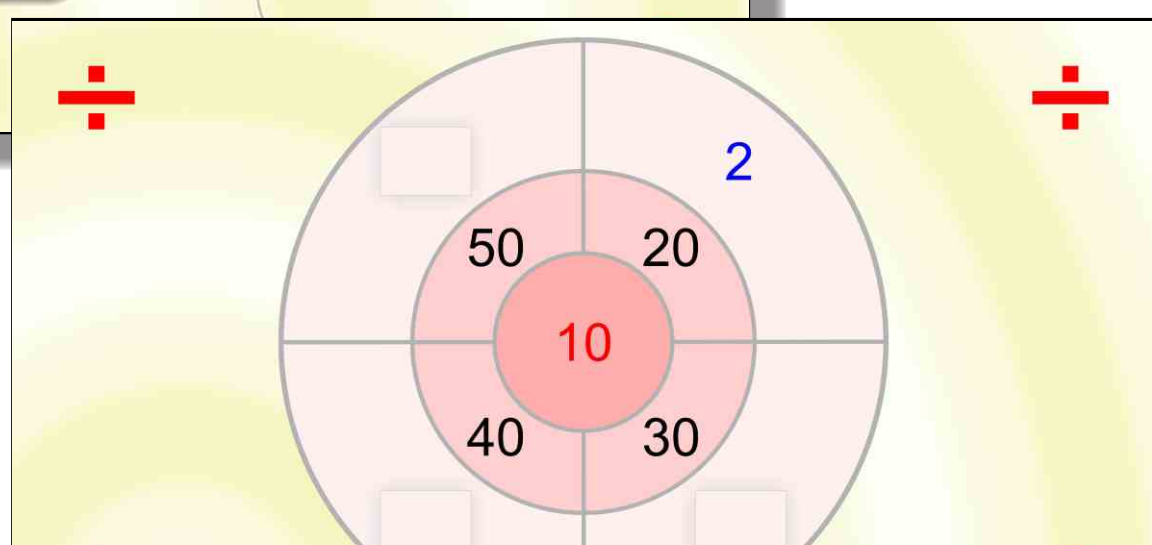

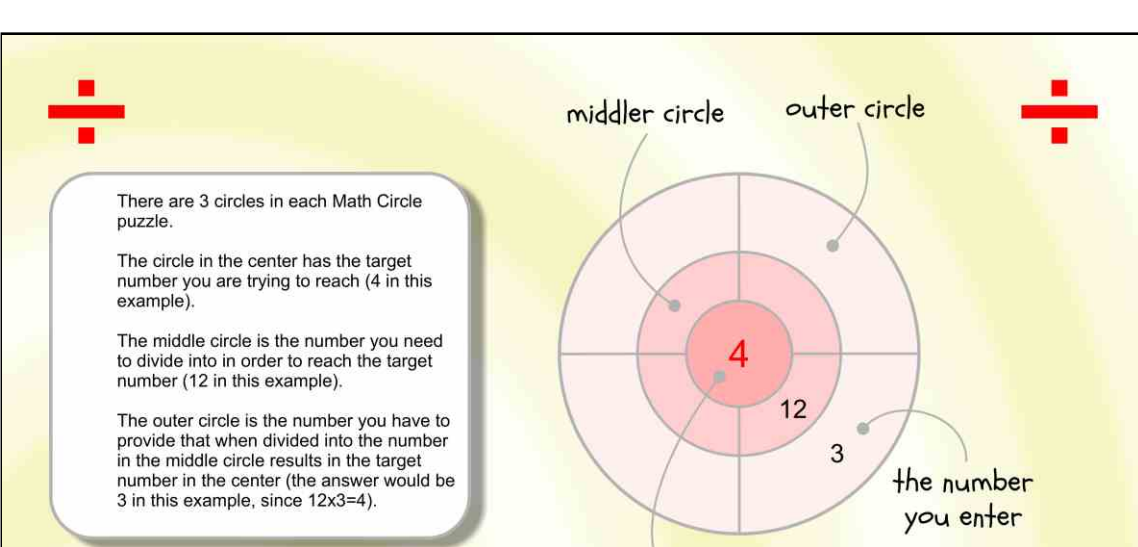

Division

10 puzzle slides

1 instruction slide

Audio assist

Math Circles Division is a fun series of GOOGLE Slides math puzzles to help practice dividing one number into another. Find the correct number that when divided by the middle number makes the target number in the center. Do this for each number around the circle. This is a fun way to practice division. Each Math Circle has 10 basic division problems to solve. Work your way around each circle until all 4 numbers have been entered. There are 10 Math Circle puzzle slides each with 4 basic division problems to solve. The division problems have been specifically designed to help the student spot patterns in the numbers, helping to solidify their learning. An instruction slide at the front illustrates what you need to do and has audio assist, so the student can 'listen' to the instructions.
