

# Math Circles

## Subtraction

18 puzzle slides

1 instruction slide

Audio assist

Math Circles Addition is a fun series of GOOGLE Slides math puzzles to help practice adding up two numbers. Find the correct number that when subtracted from the middle number makes the target number in the center. Do this for each number around the circle. This is a fun way to practice subtraction. Each Math Circle has 10 basic subtraction problems to solve. Work your way around each circle until all 10 numbers have been entered. There are 18 Math Circle puzzle slides each with 10 basic subtraction problems to solve. The subtraction problems have been specifically designed to help the student spot patterns in the numbers, helping to solidify their learning. An instruction slide at the front illustrates what you need to do and has audio assist, so the student can 'listen' to the instructions.

There are 3 circles in each Math Circle puzzle.

The circle in the center has the target number you are trying to reach (10 in this example).

The middle circle is the number you need to subtract from in order to reach the target number (15 in this example).

The outer circle is the number you have to provide that when subtracted from the number in the middle circle results in the target number in the center (the answer would be 5 in this example, since  $15-5=10$ ).
