

# Mystery Picture Math instructions

1

Start with an empty grid, which is a file called

[DL-MysPicMath-starting-grid.jpg](#)

Print one of these for each child.

2

There are several files named [DL-MysPicMath-x1](#), where **x** is a letter from a to j. Each represents one particular mystery image.

Each of these sheets has a selection of Place Value (with blocks of 10 & 1) type math questions.

Each child starts out with 2 sheets of paper: the empty grid (left) and one of these questions sheets.

3

Using the answers from the question sheets, fill in the corresponding numbers on the starting grid.

If the answer to one of the questions is, for example, 10, then fill in the square numbered 10, and so on. Do this for all the questions.

When all the correct numbered squares are filled in, the mystery image is revealed.

**NOTE:** Each question sheet has a colour and B/W version. Make sure you print the B/W version if you only have a B/W printer.
