Find the numbers in the grid, just like a wordsearch but with numbers instead. What's the catch? You have to solve the division sums first before you know which numbers you're looking for.

The first few cards just are just a straight search, just to get the student started and familiar with the grid. The number is provided on each card and you simply have to locate it in the grid. From there on, things start to become progressively more challenging.

There are a range of division sums from card to card that get harder and harder:

Decks in this series:

- Addition
- Subtraction
- Multiplication
- Division
- Combination
